VycePay

Use Case: App Install & Account Registration

Field Agent Standard Operating Procedure

Document ID: VP-AGENT-01 | Version 1.0

Field	Value
Audience	Market / Field Agents helping customers use VycePay
Purpose	Get the customer onto VycePay with a verified mobile number and first session.
When to use	New customer who has never used VycePay.
Estimated time	5–10 minutes
Language	English (show customer the app screens)

1. Goal

Customer installs the app, enters mobile number, verifies SMS OTP, and reaches the next onboarding screen (KYC). At this stage the wallet is **not** open yet.

2. Prerequisites

- Smartphone with internet (Android / iOS as supported)
- Customer's own Kenya mobile number that can receive SMS
- Customer available to enter OTP themselves

3. Standard steps

Step 1. Open Play Store / App Store on the **customer's phone** and install **VycePay** (official listing only).

Step 2. Open the app. On Register / Sign up, enter country code **254** and the mobile number (e.g. 712345678).

Step 3. Tap Send OTP / Continue. Confirm SMS arrives on that same phone.

Step 4. Customer enters the OTP. Do not take the phone to read the OTP yourself.

Step 5. If the app asks for device permission / notifications, allow as needed for the product.

Step 6. On success, customer is registered and logged in for this session. Proceed to **Guide 02 — KYC**.

4. What success looks like

Check	Expected result
OTP	Accepted; no error message
Next screen	KYC / profile / home asking to complete identity
Wrong number	Customer can restart with correct number

Common issues

- No SMS: wait 60 seconds → Resend OTP once → check network / correct number.
- Number already registered: use Login (Guide 03) or Forgot PIN (Guide 10), not a second signup.
- App crash: reinstall official app; retry once; escalate if persistent.

5. Agent checklist before leaving this step

■ App installed from official store
■ OTP verified by customer
■ Customer ready for KYC (Guide 02)
