VycePay

Use Case: KYC & Wallet Opening

Field Agent Standard Operating Procedure

Document ID: VP-AGENT-02 | Version 1.0

Field	Value
Audience	Market / Field Agents helping customers use VycePay
Purpose	Complete identity onboarding so Choice Bank opens the customer wallet.
When to use	After successful registration (Guide 01). Wallet does not exist until KYC is approved.
Estimated time	10–20 minutes (+ waiting for approval)
Language	English (show customer the app screens)

1. Goal

Submit accurate KYC details, set **username + 4-digit PIN**, confirm KYC OTP, and wait until the wallet appears (account opened). Only then can the customer deposit or send money.

2. Prerequisites

- Customer logged in after registration
- Valid government ID ready (as required by the app / Choice Bank)
- Customer chooses a username and a private 4-digit PIN (agent must not know the PIN)
- Working SMS for KYC OTP

3. Standard steps

Step 1. Open KYC / Complete profile in the app.

Step 2. Enter personal details exactly as on the ID (names, ID number, dates). No shortcuts or nicknames.

Step 3. Capture or upload ID photos **inside the app** if prompted. Good light, no blur, full document visible.

Step 4. Customer creates **username** and **4-digit PIN** when the app asks (this is for VycePay login). Agent turns away while PIN is entered.

Step 5. Submit KYC. Wait for confirmation that the request was submitted.

Step 6. When prompted, send / confirm **KYC OTP** from SMS. Customer enters the code.

Step 7. Explain: wallet opening can take a short time (bank processing). Stay on the network.

Step 8. Refresh / open Wallet or Home until balance / wallet screen loads successfully. If still waiting after the agreed SLA, escalate with customer mobile and time of submit.

4. Status meanings (agent language)

What customer sees	What it means

KYC submitted / pending	Bank is reviewing; wallet not ready
OTP required	Complete SMS OTP first
Rejected / more info	Fix data or documents; resubmit as app allows
Wallet / balance visible	Account opened — proceed to deposit

Critical rules

- Never invent or change ID numbers to “make it pass”.
- Never reuse another person's ID.
- PIN and username belong only to the customer.
- Do not leave until you have either a visible wallet OR a clear rejection message to escalate.

5. Agent checklist

- ■ Details match ID
- ■ KYC OTP confirmed by customer
- ■ Username set; PIN known only to customer
- ■ Wallet visible OR escalation logged
