

App feedback.

Date: 2 August 2026

Deposits

- They are now functioning. ✅
- I managed to top up with ease. 🙌

Airtime

- Not working 😞
- Error - "Some details were rejected by the bank. Please check and try again."
- Did we ever get this checked? I know this has never worked in the previous versions.

Send/Transfer Funds

- I entered the account number manually
- The app validated the account number - The account look-up feature is a big win 🙌
- This is the screenshot from the top up and the account validation 🙌 image omitted
-

Some advancements we can think of;

- Will we introduce sending using **@username** so that I do not have to type the recipient account everytime?
- Will we introduce the feature to choose recipient to send to from recent beneficiaries?
- Will we get the feature to create favourite recipients list?

Bills

- There's not much here at the moment - I did not test any of this coz I don't use them. Currently we have, DSTV, GOTV, STARTIMES, WATER
 - With pay Tv services facing competition from internet service providers, we can add bills like Safaricom Home Fibre , and a couple more that relate to the almost certain monthly subscriptions.
- Add bills like KPLC - Paying for electricity.

Another recommendation for the future;

- Since these are likely recurring bills, we can think of creating a scheduled payment for these cases.
- Alternatively, we can think of sending in-app reminders when it's close to 30 days from the last bill payment.

More

- The button is not responsive
- What did we intend to have in that section?

Recent transactions.

- These are now visible.
- Still not sure why i can not see the top up from Rose to my account. I believe that was yesterday.

Recommendation

- Can i get an icon/feature option to toggle them on/off - As a customer I may not want the recent transaction history to always show. So having that choice to enable/disable would be great.

Wallet section

- Share button - Not bringing up any sharing options - It does not like it's doing anything? Could the unresponsiveness be linked to the statement not being available?
- Statement download - Not working. Error message "Statement is not ready yet. Please try again."
 - I have done transactions before, why would the statement be missing? 🤔

The Landing Page

- The landing page is more user friendly now.
- The initial version had the login function somehow hidden - The login and sign up feature are well separated and easy to differentiate now.

Login

- Works well. Easy to get by.

Recommendations for the future .

- To increase account security, and try to avoid cases of Account Take Over or impersonation , we can think of adding a multifactor authentication when a new device is added to an account.

Password reset

- I tried this as well.
- Noted that the default OTP is still 123456. Are we planning to move away from this? It's a potential account security risk.
- I have intentionally entered the wrong username and correct pin.
 - We need to change the error message that came up.
 - I would expect to be told that the *credentials are incorrect* . Let's make it easier for the customer to troubleshoot such issues.
- If they reach out to support, I would not be able to tell if the pin they entered is incorrect. (edited)

Question ;

- Do we have a security criteria limiting how many times one can reset their password in a given period of time?
 - For example, Limiting it to one reset in a week.
- Also, for when a customer is resetting a password, can we give them a sort of message to flag the reset password activity if they are not aware of it?

HomePage

Salutation

- I am still seeing good morning Michael Masaki yet it's evening here. - Did we work on that bit?

Account Details

- The eye icon does not display the full account number when i click on it.
 - Is this the expectation that it only shows the last 4 digits of the account?
 - I checked in the wallet section as well. The account number is not displayed in full. Only the last 4 digits are shown. I think in this section we should show the full account number. Not sure what the logic here is. Please shed some light if there's a logic behind this.
 - If that's the case, as a customer, how would I know my account number?
